EXPERIENCE

TrustLogix

Menlo Park, CA

AI Engineer

Apr 2025 – Present

- Designed, built, and deployed production MCP servers and multi-agent AI systems using CrewAI, LangGraph, and AWS Bedrock, bringing natural-language access and automation to the data-security platform.
- Architected and delivered TrustAI, a security solution for dynamic, policy-based context control of LLMs using Open Policy Agent (OPA), enforcing fine-grained access governance so AI agents and RAG pipelines surface only authorized data
- Developed full-stack features end-to-end across Python/FastAPI/Java/Spring/Lua back-end services and React/TypeScript front-ends, owning them from design through production release.
- Fine-tuned a DistilBERT model with LoRA PEFT in PyTorch to classify unstructured data for PII/PHI/GDPR/CCPA sensitivity, reducing false positives in the classification pipeline.
- Partnered directly with enterprise customers and design partners to deploy and integrate the platform, scope requirements, and resolve production issues and support tickets end-to-end.

ZL Technologies

Milpitas, CA

Software Engineer

Oct 2023 – Mar 2025

- Designed and shipped full-stack features end-to-end in Java (with Ajax/React front-ends) on an enterprise information-governance and archiving platform.
- Built proofs-of-concept integrating LLM APIs and vector-embedding models to power retrieval-augmented generation (RAG) over enterprise data.
- Engineered concurrent task handling for mass CRUD operations across Microsoft SQL Server, Apache Solr, Apache Lucene, and Postgres.
- Wrote rigorous unit tests to ensure correctness and performance across shipped features.

PROJECTS & HACKATHONS

Goti: Agentic Deal-Negotiation Platform

AgentForge AI Hackathon · 3rd Place · May 2026

- Built an agentic platform (Python/FastAPI + Next.js 16/React 19) that turns a plain-English goal into autonomous, human-approved negotiations across 4 marketplaces — orchestrating 8 AI reasoners with cross-negotiation leverage, a durable Postgres-backed approval workflow, and live Server-Sent-Event updates.

Sidekick: Group-Chat AI Agent

Global Eazo Creator Hackathon · Regional Winner · May 2026

- Built a multi-platform (Telegram + iMessage) group-chat AI agent on Next.js, Inngest, and Anthropic Claude with a two-stage analyzer→executor pipeline, semantic per-group memory via Voyage embeddings, and AES-256-GCM key encryption; shipped to production on Vercel.

Chakra: Multi-Tenant BoM SaaS Platform

Personal Project · 2026

- Architected a bill of materials and inventory management platform for family business, turned into multi-tenant SaaS (Next.js 16, Drizzle ORM, Neon Postgres, Auth.js) with session-derived tenant isolation, a config-driven transactional inventory/consumption engine, and type-inheritance modeling — backed by a CI pipeline enforcing 100% test coverage for continuous integration of updates with Sentry monitoring.

Traveling Salesman Problem Optimization

Academic Project · May 2024

- Authored a novel algorithm to solve the Traveling Salesman Problem in feasible runtime, combining K-Means clustering, a modified Ant Colony Optimization, a modified Genetic Algorithm, and a custom uncrossing heuristic.

Customer Churn Prediction

Academic Project · May 2024

- Trained Logistic Regression, Gaussian Naïve Bayes, and Decision Tree models to predict telecom customer churn, using K-Fold cross-validation to ensure balanced, reliable evaluation.

TECHNICAL SKILLS

Languages: Python, TypeScript/JavaScript, Java, C/C++, SQL, Verilog

AI & Frameworks: LangGraph, CrewAI, AWS Bedrock, MCP, Anthropic Claude, PyTorch, HuggingFace/PEFT (LoRA), RAG & vector embeddings, OPA, FastAPI, Next.js/React, Node.js

Data & Infra: PostgreSQL/Neon, MS SQL Server, Solr/Lucene, Drizzle ORM, Docker, Vercel, AWS (S3), Snowflake, Databricks, Redshift

EDUCATION

Santa Clara University

Santa Clara, CA

B.S. Computer Science (Data Science emphasis), Mathematics Minor

Class of 2024

- Relevant Coursework:** Applied Machine Learning, Data Science, Optimization I/II, Theory of Algorithms, Operating Systems, Linear Algebra, Probability & Statistics I/II, Web & Data Mining.
